# CSS Background Properties

1. background-color
2. background-image
3. background-repeat
4. background-attachment
5. background-position
6. background (Shorthand Property)

**In this post we are gona learn about complete CSS Background properties swipe and read**

# 1. background-color

This property specifies the background color for any HTML elements,

Specified by using CSS color **values**.

- Color name
- RGB & RGBA
- Hexadecimal
- HSL & HSLA
- `currentcolor`

Keyword refers to the value of the color property of an element

```
background.css

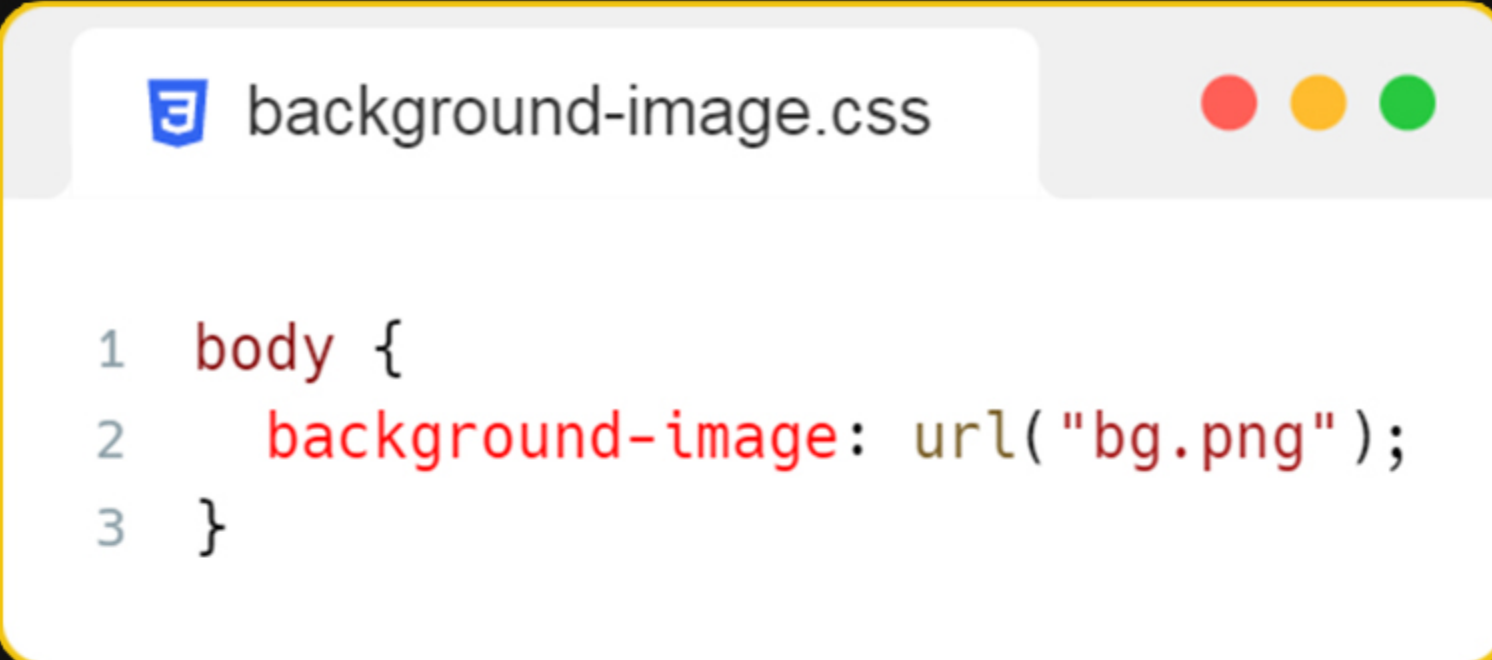

1 h1 {
2   background-color: green;
3 }
4
5 div {
6   background-color: #ffdd00;
7 }
8
9 p {
10  background-color: rgb(255, 99, 71);
11 }
```

## 2. background-image

This property specifies an image to use as the background of an element.

**Value** : url('URL') & Gradient values.

```

1  body {
2      background-image: url("bg.png");
3  }
  
```

By default, the image is repeated so it covers the entire element

Next we are learning background-repeat

### 3. background-repeat

`background-image` property repeats an image both horizontally and vertically.

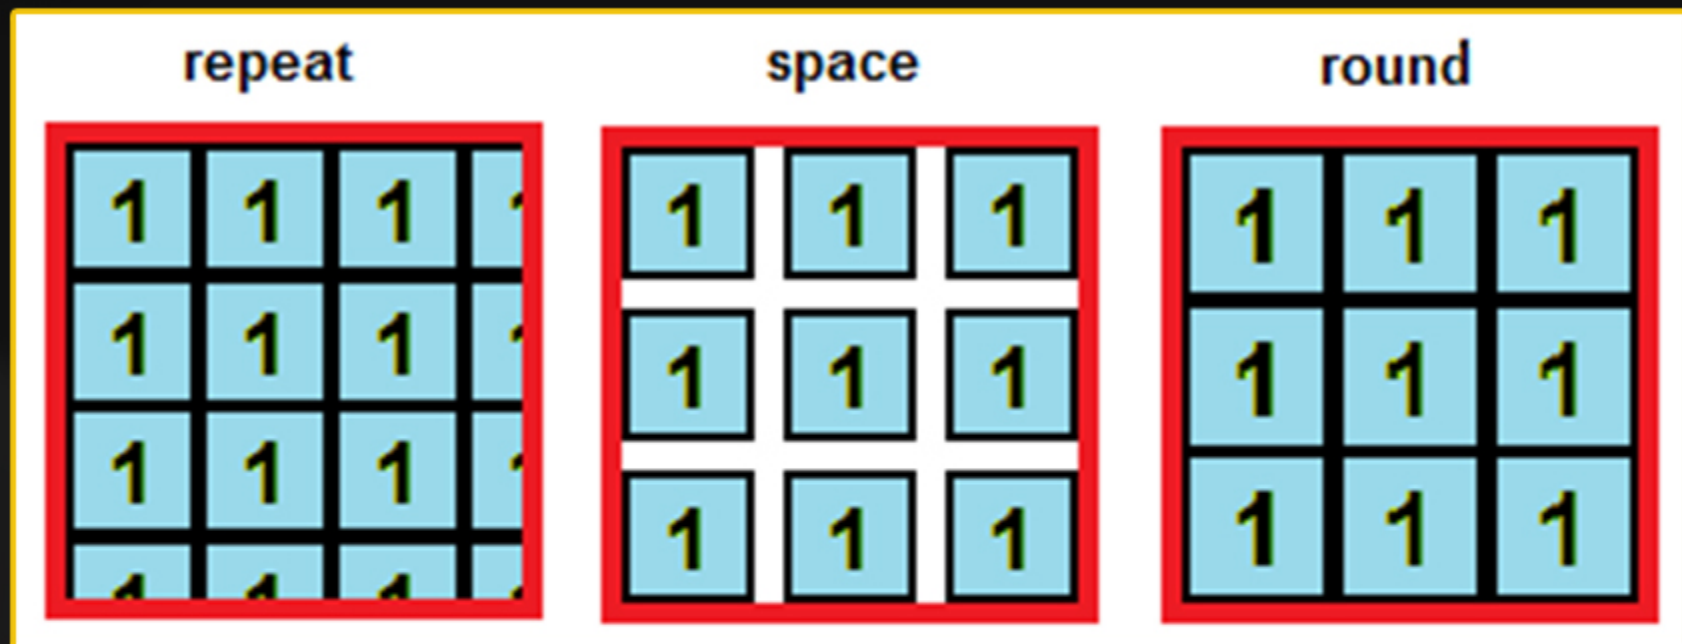

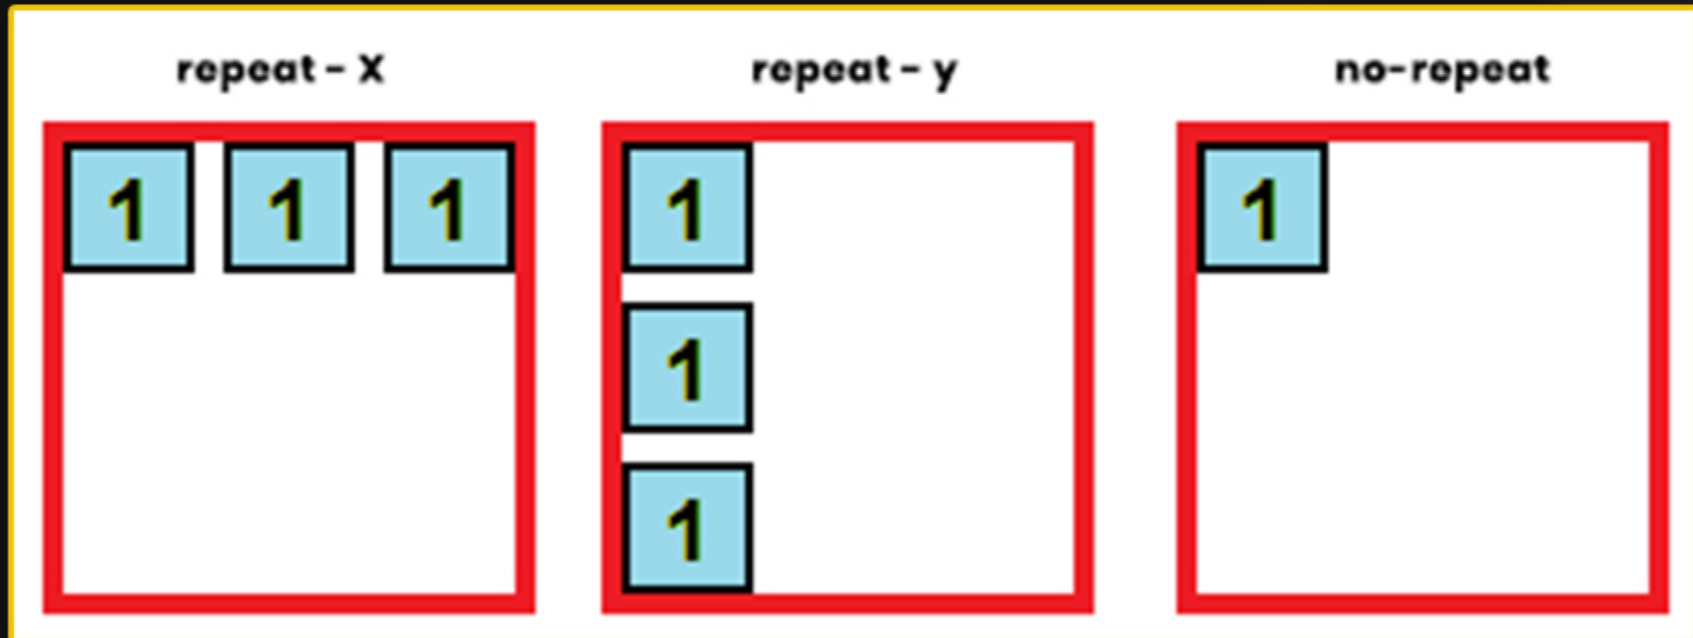

- By using **background-repeat** property sets if/how a background image will be repeated.

#### background-repeat | values

Values	Description
repeat	This is default -repeated both X & Y
repeat-x	Repeat only horizontally
repeat-y	Repeat only vertically
no-repeat	Shows only once no-repeat
space	Equally distributed with whitespaces
round	Equally distributed without space(stretch)

## For Better understanding about bg-repeat

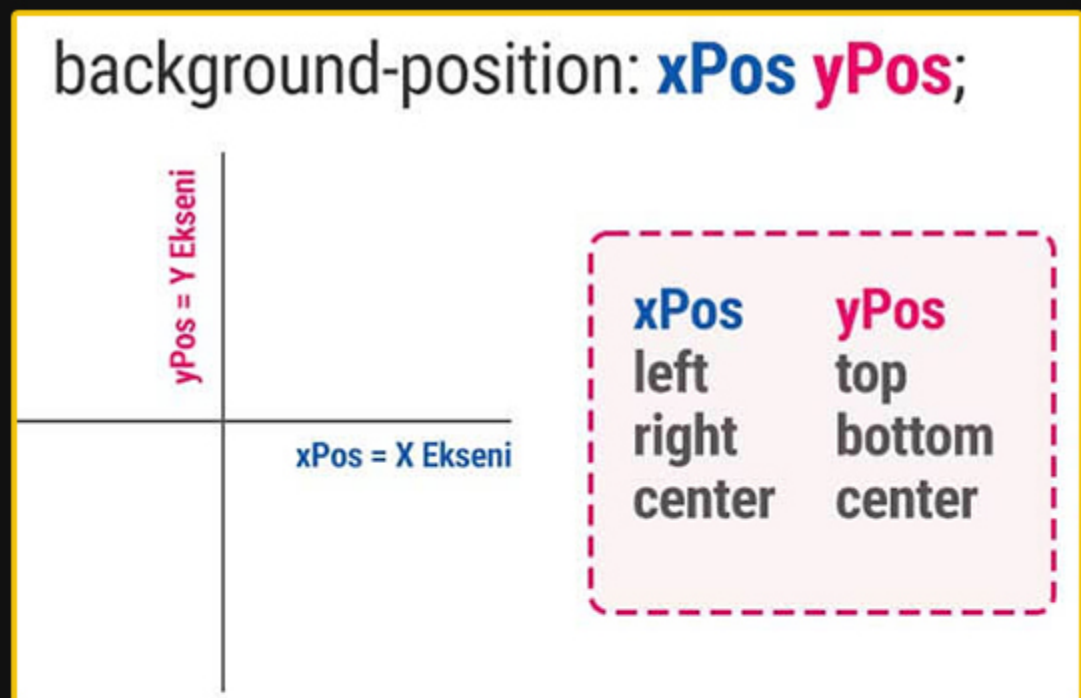

## 4. background-position

This property sets the starting position of a background image

background-position | values

- left top
- left center
- left bottom
- right top
- right center
- right bottom
- center top
- center center
- center bottom

- Percentage | %
- Pixels | px

## 5. background-attachment

This property sets whether a background image scrolls with the rest of the page, or is fixed.

### background-attachment | values

Values	Description
scroll	Default bg-image will scroll with the page
fixed	bg-image will not scroll with the page
local	bg-image scroll with element's contents

## 6. background (Shorthand)

Specify all the background properties in one single property. This is called a shorthand property.

### background Shorthand (order)

1. background-color
2. background-image
3. background-repeat
4. background-attachment
5. background-position

 FOLLOW US

 background-shorthand.css

```
1 background: #ffffff url("img_tree.png") no-repeat right top;
```
