Lesser-Known HTML Attributes You Should Use!

1. Accept

Describes which input file types are allowed.

```html
<input type="file" accept=".jpg, .png">
```

2. Autofocus

Indicates that the particular element should be focused on page load

```html
<input type="text" autofocus>
```

3. Inputmode

Hints at the type of data that might be entered by the user while editing the element or its contents.

```html
<input type="text" inputmode="url" />
<input type="text" inputmode="email" />
<input type="text" inputmode="numeric" />
```

This allows a browser to display an appropriate virtual keyboard.

4. Download

Target will be downloaded when the user clicks on the hyperlink.

```html
<a href="document.pdf" download>Download PDF</a>
```

5. Autoplay

Ensures that the audio/video will automatically start playing as soon as it is loaded.

```html
<video autoplay
src="https://cdn.mysite.com/media/myvideo.mp4"
poster="image.png">
</video>
```

6. Multiple

This attribute allows the user to select multiple values.

```
<input type="file" multiple>
```

You can use it with file and email types of <input> and the <select> tag.

7. Pattern

Specifies a regular expression that the <input> value is checked against on form submission

```
<input name="username"  pattern="[A-Za-z0-9]+">
```
